STATISTICS

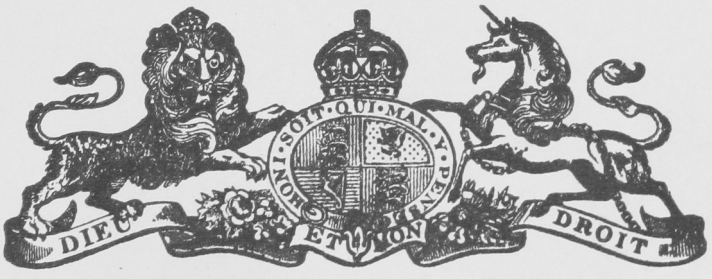
OF

THE STATE OF TASMANIA

FOR THE YEAR

1925-26

Compiled under the Direction of the Commonwealth Statistician by the Tasmania Branch of the Commonwealth Bureau of Census and Statistics



By Authority

JOHN VAIL, GOVERNMENT PRINTER, TASMANIA

1927

PREFATORY NOTE.

THE Statistics in this Volume have been compiled in the Tasmanian Branch of the Commonwealth Bureau of Census and Statistics under the general direction of the Commonwealth Statistician and Actuary (Mr. C. H. Wickens, F.I.A., F.S.S.).

The first three parts here included, namely Vital and Meteorological, Trade and Shipping, and Stock and Crops are printed at the expense of the Commonwealth Government. The remaining parts, Manufacturing Production, Public Finance, Local Bodies Finance, and Friendly Societies, are printed at the expense of the Government of Tasmania.

The Statistics for 1925-26 cover (with some difference of arrangement) most of the ground covered by the volume of Tasmanian Statistics issued up to 1922-23. The parts omitted are those dealing with Private Finance, Law and Crime, and Social provision other than Friendly Societies. It is expected that the substance of these will be printed for 1926-27.

On Mr. W. T. Murphy has fallen the chief burden of supervision of the whole volume. A more particular responsibility has fallen also on Mr. Murphy in respect to all Statistics of Finance, and on Mr. C. L. Steele, B.Com., for Population and Vital Statistics, on Mr. K. Andrews, B.Com., for Trade and Shipping, and on Mr. S. E. Solomon, B.Com., for Manufacturing Statistics, of which a much fuller report is offered this year than has before been attempted.

To these and to all other members of the Staff I am indebted for keen co-operation in the task of making this statistical account of Tasmania, year by year, a more accurate, and more significant, and, I hope, more intelligible, record of the facts.

L. F. GIBLIN,
Government Statistician and Deputy Commonwealth Statistician

CONTENTS.

For detailed list of Contents, see Table of Contents to each Part.

PART I.—GOVERNORS, PARLIAMENTS, &c. [*Not Printed*].

PART II.—POPULATION [*Substance included in Part III.*].

PART III.—VITAL AND METEOROLOGICAL [*Including Population*].

PART IV.—TRADE AND SHIPPING.
RAILWAYS, &c. [*Not Printed*].

PART V.—PRODUCTION, STOCK AND CROPS.
PRODUCTION, MINERAL [*Not Printed*].

PART Va.—PRODUCTION, MANUFACTURING.

PART VI.—PUBLIC FINANCE.
APPENDIX —AUSTRALASIAN FINANCE.

PART VI.—(SECTION II.)—FINANCE (LOCAL BODIES).

PART VII.—PRIVATE FINANCE [*Not Printed*].

PART VIII.—LAW AND CRIME [*Not Printed*].

PART IX. (SECTION I.)—EDUCATION, &c. [*Not Printed*]
(SECTION II.)—FRIENDLY SOCIETIES.

STATISTICS

OF

THE STATE OF TASMANIA

FOR THE YEAR

1925-26

Compiled under the Direction of the Commonwealth Statistician by the Tasmania Branch of the Commonwealth Bureau of Statistics

Vital and Meteorological 1925-26

(Corresponding in content to Part III. of Tasmanian Statistics, published up to 1922-23)

DEMOGRAPHY.

For a brief summary of the results for Tasmania of the census of 1921, see Tasmanian Pocket Year Book; for fuller information see Tasmanian Statistics, 1921-22, and Census Bulletin, No. 17; for complete details see the Census Reports of the Bureau of Census and Statistics, Melbourne.

For estimate of mean population of Municipalities in 1925 see page 16.

Reference may be made to the Commonwealth Annual Bulletin of Demography for fuller information for Tasmania in respect to:—

Ages, birthplaces, and occupations of parents of children born.
Birthplaces and occupations of persons dying.
Ages, birthplaces, occupations, and conjugal condition of persons marrying.

Also for detailed information for the Commonwealth as a whole, but not for Tasmania separately, in respect to:—

Mother's age, showing duration of marriage and previous issue.
Interval between marriage and first birth.
Causes of death classified according to occupations.
Duration of marriage, total issue, and average family for persons dying.

THE MEASUREMENT OF POPULATION.

The population of Australia is counted systematically every 10 years. The last census was made on the 4th April, 1921. The principle now accepted is to make it as near as possible to 1st April, provided that it is not made at a week-end or during Easter holidays.

At the census, the numbering is carried down to the smallest divisions, and full information as to age, occupation, nationality, &c., is collected. Between censuses the only official counting is for whole States, and information as to age, &c., is very incomplete. The estimate is made by keeping count of the births and deaths in each State, and of the arrivals and departures to and from each State. These estimates are made by the Commonwealth Statistician for the last day of every quarter.

There are, no doubt, errors in the census, but they may be taken as negligible. This is not the case with the inter-censal estimates. The counting of births and deaths is very accurate, but it has been found impossible to get a perfectly exact record of migration. Movement across land frontiers of States presents obvious difficulties in counting, but experience has shown that the estimates of Tasmanian population are even more liable to error than in the case of mainland States. There is, in general, a considerable number of unrecorded departures, so that any State which is losing population by migration tends to have its population overestimated.

When a census is made, the error in the previous estimates is shown. For the next inter-censal period it is assumed that the previous error is going on, and a correction is made to the quarterly estimate by making an allowance, where necessary, for unrecorded departures based on the experience of the preceding inter-censal period. For Tasmania this amounts to an addition quarterly of 65 males and 25 females to the recorded interstate departures, and of 1 per cent. to male recorded departures oversea, and 4½ per cent. to the female recorded departures oversea.

From the persistent efforts made to obtain greater accuracy in migration records, it might be expected that this allowance would be more than would be required at present. On the other hand, the unprecedented drain on Tasmanian population during the last four years might be expected to require a still larger allowance. On the whole it is probable that the official estimates are very close to the actual facts, with a slight presumption that the population of Tasmania is being, to a very small degree, overestimated.

For any division smaller than States it is impossible to give any trustworthy estimate between censuses. Where growth has been, in a general impression, steady since 1911, a fair estimate may be made, based on past experience, and the last quarterly estimate for the whole State. But war broke all continuity in the last decade, and the recent abnormal migration from Tasmania makes any such calculation worthless for any town, municipality, or other division of this State. Under these circumstances, the best source of information is the electoral roll, and the number of electors enrolled, combined with the quarterly estimates for the State, forms a fair basis for rough estimates of inter-censal populations of parts of this State. This is the basis of all such estimates printed in the following pages.

STATISTICAL SUMMARY for TASMANIA, from 1836 to 1926 inclusive.

113. Gastro-enteritis, Diarrhœa										

a Record incomplete.

NOTE.—The two tables above (and other similar tables), must be read with some caution on account of changes of classification that have taken place before 1910. Since 1910 the classification has been substantially uniform. In the last table, in order to allow for known changes, the classes 99, 100(*a*) and 101 are grouped together; as are 159, 160, and 161. For the same reason, but with less certainty, 80 and 113 are grouped together tentatively at the end of the table.

INFANT DIARRHŒA (BY MONTHS).

DEATHS under Two Years from Diarrhœa and Enteritis since 1900.

Year.	Total.		Month in which Death occurred.

WEATHER, 1925.

SYNOPSIS OF THE WEATHER OVER TASMANIA DURING THE YEAR 1925

REPORT OF THE WEATHER BUREAU, HOBART.

The year 1925 was one of under-average temperature, and parts of the north-east had an over-average rainfall. In the Derwent Valley, Midlands, and parts of the Northern Division, rainfall deficiencies amounted to over 30 per cent. of the normal. Mean temperatures were from ½ degree to about 1 degree below normal, except about Launceston, where an excess of ½ degree was recorded.

The midsummer months were marked by a prevalence of cool, southerly weather and an entire absence of hot days. Mean temperatures were one or two degrees below normal in southern districts in January, and generally in February. During the following month marked variations in temperature occurred. Two particularly cold snaps were experienced, the 22nd being the coldest March day at Hobart for at least 30 years, while, on the other hand, on three or four occasions temperatures exceeded 80 degrees. The late autumn and early winter months were relatively mild, particularly over the northern half of the State where the mean temperature was one or two degrees above the average in April, and somewhat less in May and June. From now on, however, under-average mean monthly temperatures were experienced, August being the coldest on record in the Midlands and for at least 16 years at other stations. Mean temperatures for this month were from 1 to 3 degrees below normal. Temperature conditions improved slightly until October, when, however, there was still a slight deficiency of warmth. Occasional cold snaps, with falls of snow, were a feature of the spring months, and some of these, with severe frosts, caused many losses of lambs, particularly in the Midlands, and checked all growth in plant life.

Except in the east, in May, the rainfall was at no time during the year excessive. In this case, heavy easterly rains so late in the season resulted in the May totals being the highest for over 20 years at many stations. In the west (protected from the easterlies), it was the driest May for 35 years. No month had a general over-average rainfall. In February and August the greater part of the State, and in October most of the north-western half, received more than the normal, but, in other months, only scattered districts were favoured. November was the driest since 1911 in parts of northern districts, between Devonport, Launceston, and Scottsdale, and only the Midlands and parts of the south received more than half the normal.

September, at some southern stations, was the driest since 1906 and at others for over 30 years. Notwithstanding this, however, the spring as a whole was not so dry as that of 1921 in the south-east and lower Derwent Valley or that of 1919 elsewhere.

Although the winter was favourable for agriculture and early crops did fairly well at first, the lack of rain and the prevalence of cold weather told against harvest prospects, and indications point to light crops.

January was marked by high air pressure conditions broken by five slight depressions, mainly of the combined monsoonal and antarctic type, but the last two were distinctly " antarctic " and of somewhat greater intensity. Practically only one good fall of rain occurred (on the 13th-14th), and this saved many of the late crops from failure. Several cold snaps occurred, and on 29th January a severe frost did much damage to potato, tomato, and other tender crops in the Midlands and north.

High pressure conditions continued during the first 10 days of February. Then followed a series of antarctic depressions, increasing in intensity till the 20th and gradually subsiding thereafter, with several cold days. Two or three fairly good rains occurred, and rough westerly and south-westerly weather was experienced during the latter half of the month. Much damage was done by wind to orchards and hop fields in the Derwent Valley. Fatal accidents were associated with lightning and wind storms respectively on the 2nd and 19th.

Pressure fluctuations in March were frequent, and were due to a rapid movement of depressions and anti-cyclones. High winds occurred on the 13th, a maximum gust velocity of 66 miles per hour being recorded at Hobart. Practically all the rain fell on the 3rd-4th, 12th, and 21st-23rd. A severe frost on the 22nd damaged potato crops in some districts.

A series of well-developed anti-cyclones were the principal factors controlling April's weather. Intervening antarctic depressions were of very little intensity, except that of the 19th-22nd, which caused rough, westerly weather, at first followed by cold, southerly gales, with a cyclonic development off the eastern entrance to Bass Strait. Shipping suffered considerable buffeting and delay. Three light rains occurred during the first half of the month, and unsettled conditions followed, with one or two fairly good falls.

Pressure characteristics during May and June were unique. Slowly moving anti-cyclones of considerable intensity were an outstanding feature, culminating in June with a remarkable anti-cyclonic development which resulted in the highest barometer readings recorded at Hobart since 1855, and the highest on record for the month of June. May was also characterised by the development of cyclonic disturbances off the New South Wales coast. Slight antarctic depressions, advancing from the west, combined with such systems on the 12th and 31st, and heavy, warm, easterly rains fell in eastern parts of Tasmania, resulting in floods in the South Esk and other eastern rivers. Twenty-four hour falls, of 3 to 6 inches, were recorded at a number of eastern stations on

the 13th. The only other depression of the month produced a moderate to heavy rain over the northern half of the State on the 23rd. Many frosts occurred about the middle of the month, severe on the 22nd, but mean minimum temperatures were 2 to 4 degrees above the normal. June was dry in northern districts. Weather conditions were more or less unsettled this month, with scattered light rain at times. The best falls were recorded on the 1st, 6th, and 17th-18th. Frosts and fogs were prevalent, and shipping services were delayed by the latter on one or two occasions.

A steady movement of antarctic depressions and anti-cyclones of moderate intensity brought several light to moderate rains during July. A cyclonic development over the interior of South Australia resulted in heavy rain over Eastern Tasmania on the 11th-13th as the disturbance passed south-eastward to the Tasman Sea. Slight flooding occurred in the South Esk and other eastern streams. Cold, rough, southerly weather developed in the rear of a disturbance over the Tasman Sea on the 22nd and 23rd. The month closed with boisterous north-westerly weather with a rapidly fluctuating belt of antarctic low pressure over southern ocean areas. The latter part of the month was mild and springlike, but the mean temperature for the period 5th-10th was lower than that for any other six-day period since May, 1917.

Another particularly cold snap occurred on the 3rd August, and snow fell where it had not been seen for 17 years. During the first half and latter part of this month, barometers were chiefly high, but developments of secondary depressions occurred on the 2nd and 10th, the former with high northerly winds. A few days of unsettled weather, and showers in each case, concluded with cold, rough southerlies and snow. Two deep antarctic depressions brought boisterous north-westerly to westerly weather and some rain between the 17th and 22nd.

Some good rains occurred about the middle of September over the northern half of the State, but, elsewhere, although conditions were unsettled, only very light, scattered showers were recorded. There were several warm, spring-like days, but cold, southerly snaps, with snow, occurred on the 4th and 22nd-24th. Fairly high barometers during the first fortnight were followed by a series of antarctic depressions which developed considerable intensity about the middle and end of the month.

A temporary improvement in rainfall and temperature conditions occurred in October. The first part of the month was decidedly cool, but the latter part mild, with several very warm days. A spell of low pressure prevailed till the 20th, with rapidly moving depressions increasing in intensity till the 11th, when rough north-westerly to westerly weather was experienced. Some good rains fell, particularly over the northern half of the State, about this time. "Highs," centred over the Tasman Sea, were the chief controlling agents during the last week or so.

High air-pressure conditions prevailed throughout November, broken only by five very slight depressions. One of these, on the 18th, developed a cyclonic centre inland over the South-Eastern States, and resulted in the only good rain of the month in Tasmania. An inch was recorded in parts of the Midlands, and materially brightened the agricultural outlook, but the fall was insufficient to relieve the effects of the dry spring. Depressions showed a tendency to intensify over the South Tasman Sea, holding up the aproaching "Highs." As a result spells of cool, southerly weather were experienced, but some warm days occurred about the middle of the month. A severe frost on the night of the 5th seriously damaged many fruit crops.

Dry weather continued during December, but more particularly in eastern, northern, and Midland districts, many stations having less than one-quarter of the normal rainfall. Over the south-western half of the State several nice light, to moderate, rains occurred.

Series of rapidly moving depressions, with several warm days, culminated on the 9th and 25th respectively in cold westerly to southerly snaps, due to developments of secondary depressions over the State and South Tasman Sea. Light falls of snow occurred on the highlands and hail on the exposed coast. The 5th was the warmest day over parts of Southern Tasmania since February, 1922.

The rainfall during the year, for the various districts, is summarised in the following table:—

District.	Mean District Rainfall, 1925.	Average for previous years.	Percentage departure from normal.
	in.	in.	%
Northern	29·42	39·85	26 below normal

TRADE: INTERSTATE AND OVERSEAS.

REPORT FOR 1925-26.

(Figures in parentheses are those for the corresponding period of 1924-25.)

For the year 1925-26 Imports were valued at £8,451,000 (£8,808,000), a decrease of £357,000, or 10 per cent. Direct Oversea Imports accounted for £1,518,000 (£1,681,000), or 18 (19) per cent. of Imports; and Interstate Imports for £6,933,000 (£7,133,000), or 82 (81) per cent. of the total.

Exports for the year were valued at £8,711,000, a decrease of £137,000, or 1½ per cent., being shown. Direct Oversea Exports, £2,579,000 (£3,306,000), show a decrease of 22 per cent., and represent 29½ (37) per cent. of total exports.

The Trade Position.

In order to obtain a measure of the balance of visible trade, the above figures must be subjected to some adjustment. The value of Direct Oversea Imports, in accordance with the usual practice, does not include customs duties paid, but the Interstate Imports of necessity include duties paid in the case of re-exports from oversea, and excise in the case of some goods of Australian manufacture. The question of the exclusion of customs duties in the case of a Federal State is a difficult one, and is bound up with the whole question of the Commonwealth payments to Tasmania and receipts from Tasmania. This aspect will be dealt with separately as part of the general balance of payments to and by the State. For the purpose of obtaining a measure of the balance of visible trade comparable with other years, the best course would probably be to subtract from the Interstate Imports the duties and excise paid on them in other States. This amount, however, cannot be ascertained with any certainty.

The alternative is to add to the value of the Direct Oversea Imports the duties paid on them. This amount can be accurately obtained, and is, moreover, a smaller correction than the other. No comparison is, of course, possible for the period 1910-1922, when no record of Interstate Trade was kept. But for the " book-keeping " period 1900-1909, a fair comparison can be made by adding to the published figures for Oversea Imports, both direct and *via* other States, the duty actually paid on them, for which accurate figures are on record.

Using these adjusted totals we get the following results:—

	Imports and Duty.	Exports.	Excess of Exports.
	£1000's	£1000's	£1000's
1900-04 (average)	2704	2927	223
1905-09 (average)	3448	3799	351
			Excess of Imports.
1922-3	9376	7985	1391
1923-4	10,128	8844	1284
1924-5	9090	8848	242
1925-6	8716	8711	5

The comparison is as follows:—

	Imports with Duty as a Percentage of Exports.
1900-4	92·4 per cent.
1905-9	91·8 ,,
1922-3	117·4 ,,
1923-4	114·5 ,,
1924-5	102·7 ,,
1925-6	100·1 ,,

There was therefore a large favourable balance of visible trade from 1900 to 1909. When the record is taken up again in 1922, a very large adverse balance is seen for two years, which decreased very strongly in 1924-25 to less than 3 per cent., while in 1925-26 it is practically wiped out.

The great excess of imports in 1922-24 is accounted for by heavy Government borrowing and private investment of capital from other States or Oversea, but a full interpretation cannot be given without an analysis of the changes in payments made to and by the Commonwealth Government, as well as in the tourist expenditure and a number of minor items. The reduction of the adverse balance in 1924-25 and 1925-26, as was seen from detailed consideration of Imports, may be fairly ascribed to reduced capital development, coupled with general economy in consumption.

TRADE OF PORTS.

The total trade, as measured by value, is shared among the various ports as follows:—Hobart 55 (55), Launceston 28 (29), Burnie 6 (6), Devonport 5 (5), per cent. respectively, the remaining ports accounting for 6 (5) per cent. Only four ports, Hobart, Launceston, Smithton, and Strahan, show a decrease in aggregate trade for the year. In Hobart and Launceston Imports are some £200,000 less in each case, while Exports, owing partly to lower wool prices and partly to the very poor values realised oversea for last season's apples, were about £100,000 and £200,000 less respectively.

The decreases per cent. of previous years' figures were: Launceston 7, Hobart 3, Smithton 4, and Strahan 1. Increases occur in Stanley, King Island, Burnie, Ulverstone, and Devonport, the figures being 48, 10, 6, 5, and 2 per cent. respectively. The aggregate trade of Tasmania shows a decrease of 3 per cent. Oversea Trade decreased by 18 per cent., but Interstate Trade increased by 3 per cent.

If measured in terms of the tonnage of cargo (Oversea and Interstate) shipped and discharged, the position of ports as regards volume of trade is somewhat altered. The share of Hobart is 54 (54) per cent., or little different from the value measure. Launceston, however, drops to 15 (13) per cent., and Devonport ships annually some 150,000 tons of limestone valued comparatively low, which has the effect of dwarfing Launceston of trade. Hobart ships large quantities of heavy goods—zinc residues, *e.g.*—whose value weight ratio is below the average, and so almost maintains her position. Burnie, according to cargo measurement, holds about 7 per cent. of Tasmania's trade, and the remaining ports about 8 per cent. The following table upon which the above percentages are based shows the tonnage of Interstate and Oversea cargo shipped and discharged at principal Tasmanian ports.

	1924-25.	1925-26.	Increase or Decrease Per Cent.
Hobart	626,000	608,000	— 3
Launceston	147,000	168,000	+ 15
Devonport	207,000	191,000	+ 2
Burnie	*a*	74,000	*a*
Other	174,000	88,000	— 2½
Tasmania	1,154,000	1,129,000	— 2

(*a*) Included in "Other."

IMPORTS.

For the year 1925-26 imports of food, £1,783,000 (£1,738,000), show an increase of 2½ per cent. Imports of butter, meat, condensed milk, cocoa beans, dried fruits, maize, oats (almost double), bran, and pollard, nuts, pickles, onions, and groceries, all show increases, while decreases occur in the values of aerated waters, biscuits, confectionery, cocoa, fresh fruit, flour, and jam. Wheat imports were valued at £277,000 (£287,000), showing a decrease of some £10,000. The value of imported wheat averaged 6s. 1d. per bushel, as compared with 6s. 4d. last year. Tea and sugar show little change. Imports of alcoholic liquors, £230,000 (£225,000), have risen a little on account of an increase of £8000 in beer imported, partly offset by a decline in spirits.

Tobacco, £298,000 (£303,000), shows a small drop; cigars and cigarettes remain about the same.

The live animal class, £55,000 (£70,000), owes its decline to a falling off of £3000 in the value of sheep imported, and to a reduction of nearly half the number of horses imported in 1924-25. A comparison of the net imports of horses and sheep for the past three years may be given as follows:—

	1925-26. Number.	1924-25. Number.	1923-24. Number.
Horses	176	442	628
Sheep	19,279	19,857	32,721

Animal substances, £134,000 (£142,000), show a decline, due principally to wool values £120,000 (£129,000). The bulk of this wool, which was imported by Tasmanian manufacturers to save buying stocks before they were wanted, came from Australian States, while last year it came from New Zealand. Prices in 1925-26 were also very much lower than those paid in 1924-25.

The fall in clothing and textiles, £1,529,000 (£1,598,000), would indicate that the tendency to general economy, which was apparent last year in a fall of £626,000 from £2,224,000, is being maintained. Boots show a decrease of £17,000, while hats are about the same. The general apparel group shows a fall of some £33,000, against a decrease last year of £155,000, or 20 per cent. on the figure for 1923-24. Textiles, including blankets, floor coverings, and piece goods, have decreased considerably. Chaff-bags have recovered to £18,000, after a phenomenal drop from £50,000 last year.

Oils, £353,000 (£302,000), are an exception to the general rule of decreases. The continued increase in motor transport, though it is slackening a little, means increased consumption of petrol. Imports increased in quantity from 2,456,000 to 2,835,000 gallons, or about 14 per cent. Paints and varnishes, £44,000 (£48,000), have fallen. The more important class of stone and ores, £607,000 (£820,000), shows a heavy decrease, of which a large proportion is accounted for by a fall of some £180,000 in imports of zinc ores for electrolytic treatment. The quantity of zinc imported fell almost a third, which may be due perhaps to a greater use of Tasmanian ores from the West Coast. The quantity of coal imported fell by some 14,000 tons, and the value proportionately, £98,000 (£118,000).

Manufactured metals and machinery, £1,570,000 (£1,676,000), show the greatest decline of any class. Machinery, which makes from one-fifth to one-fourth of the class, has dropped about 14 per cent. The decrease is general over all items of machinery.

Electrical machinery declined by £31,000 to £137,000. Motor-cars, with their parts, which now account for over one-third of the whole class, show a smaller decline, £599,000 (£612,000). If allowance is made for motor-cars which leave the State, the total expenditure on imports connected with motor traffic may be shown thus:—

Net Imports of—	1925-26.	1924-25.	1923-24.
	£	£	£
Cars and parts	438,000	439,000	530,000
Petrol	238,000	184,000	172,000
Tyres	99,000	55,000	63,000
	£775,000	£684,000	£765,000

Of the remaining items of metals and manufactured metals, aluminium, copper-wire, and lead show substantial increases, but most other items, including tin plate, £43,000 (£83,000), and galvanised iron, £56,000 (£65,000), have declined.

Rubber and leather goods increased largely, owing to the principal item, tyres and tubes, having increased 80 per cent. Wood and manufactures of wood, on the other hand, show a decided fall, with a drop in timber imports, £22,000 (£38,000), of well over one-third. The earthenware group, £121,000 (£145,000), shows a general decrease. Cement imports have now reached the low figure of £8000, as compared with £36,000 two years ago. The books and paper class, £234,000 (£225,000), shows a slight increase, which is fairly general.

There is a small increase in the chemical group, £282,000 (£274,000), of which fertilisers, £104,000 (£90,000), is the principal item. There is an increase of some £44,000 in the imports of rock phosphates for manufacture here, and a decrease of £30,000 in imports of manufactured fertiliser.

Among the more miscellaneous groups no significant increase occurs, and in general all items of importance have fallen away. Soap, which declined from £67,000 to £43,000 last year, has dropped another £10,000 to £33,000.

EXPORTS.

As opposed to the 10 per cent. decrease of Imports, Exports, at £8,711,000, decreased only 1½ per cent. Apples shipped Oversea realised an average of only 3s. per bushel, and the above figure includes them at this value. Taking into consideration the fall of over half a million pounds in the value of wool shipments, together with the unfortunate condition of the Oversea apple market, the fall of only £137,000 in total exports is not so great as would be expected, and indicates an appreciable increase in other items.

Exports of foods and foodstuffs in the aggregate, £2,904,000 (£2,801,000), show a small increase.

Butter exports decreased from 25,000 cwt. to 13,700 cwt., while the value dropped from £169,000 to £103,000, the price being about £1 per cwt. higher. Imports of butter amounted to 70 per cent. of the quantity exported, bringing the net exports in value down to £25,000.

The net exports of butter for the last three years were as follow:—

	Cwt.	£
1925-26	4500	24,500
1924-25	16,400	101,500
1923-24	15,400	117,000

Cheese and bacon fell away appreciably, while fish and crayfish remain almost the same.

Potato exports, £599,000 (£345,000), show a large increase, which was due to higher prices, as the quantity exported was only 47,400 (54,600) tons. Most kinds of agricultural produce again show considerable decreases both in quantity and value. Oats, £62,000 (£101,000), chaff, £20,000 (£59,000), and pease, £84,000 (£108,000). Only 7000 (9000) bales of hops were exported, crops in 1925-26 being somewhat less than the previous year. The value fell from £216,000 to £163,000.

Apple exports are made up of the Oversea shipments of last season with a good proportion of the Interstate shipments of the previous season, and last season's Interstate shipments up till 30th June, 1926. Although quantities exported 3,154,000 (1,837,000) bushels, are easily a record, the disastrous price received for Oversea apples swamped the good prices received for Interstate shipments, and brought about for total apple exports a decrease of 12 per cent. in value, £613,000 (£694,000). Pears increased in quantity by 25 per cent. to 103,000 bushels. Some shipments Oversea were a dead loss, but some realised very good prices, so that values show a rise, £30,000 (£27,000).

Fruit manufactures, with the exception of pulp, £200,000 (£203,000), which fell slightly, all show increases both in quantity and value. Interstate consignments of preserved fruit doubled to £97,000 in value, while shipments Oversea were halved. The total was £122,000 (£99,000). Both Oversea and Interstate shipments of jam increased, the latter from £287,000 to £340,000, while the total was £394,000 (£331,000).

Exports of zinc fell slightly to 44,000 tons, but with higher prices the value increased from £1,573,000 to £1,589,000. Including other metal products associated with zinc, and deducting the value of the raw material imported, the value of the net exports of this industry has increased from £860,000 in 1923-24 to £1,260,000 in 1925-26.

Of other mineral products, copper, £348,000 (£328,000), and silver-lead, £182,000 (£180,000), increased both in quantity and value. Tin exports, £240,000 (£220,000), increased by one-eleventh, but this increase was due to higher prices, as the quantity fell slightly to 884 tons; tin ore rose about 50 per cent. in both quantity and value, which for the year was £37,000 (£25,000). Exports of osmiridium reached 4800 oz., valued at £127,000; exports of this metal in 1924-25 were negligible.

Wool exports at 35,500 bales were about 1000 bales short of last year's figures, and owing to a heavy fall in prices were about 41 per cent. less in value, £816,000 (£1,386,000). Hides and skins, £399,000 (£380,000), increased by about 5 per cent. Of this item sheepskins, £94,000 (£94,000), and furred, £276,000 (£251,000), increased in quantity, while hides fell away.

Manufacturing developments are reflected in some welcome increases in exports. Confectionery shows a substantial surplus of Exports over Imports. Woollen manufactures of all kind were valued at £335,000 (£254,000), and so have increased almost one-third. In cement the net exports have reached 27,000 (22,000) tons, with a net value of £106,000 (£86,000). Carbide exports, however, at £53,000, show a decrease of some £8,000.

Exports of timber were 42½ (44½) million feet, valued at £534,000 (£557,000), of which only 6 (7) per cent. went Oversea. Both undressed and dressed blackwood show increases. Blackwood in log, however, fell slightly. Myrtle has increased from £19,000 to £22,000. There is a slight decrease in sawn eucalyptus timber, £290,000 (£292,000), and a considerable drop in palings, £34,000 (£47,000).

One or two of the miscellaneous items are of interest. The movement of "personal and household effects" is due partly to family migration and partly to buying away from home. In 1925-26 both Imports and Exports diminished, with the result that net exports of personal effects fell from £28,000 to £21,000. Again, net imports of samples, which are some indication of retail trade, decreased in value from £36,000 to £9000.

L. F. GIBLIN, Deputy-Statistician.

Commonwealth Bureau of Statistics,
Hobart, 22nd December, 1926.

IMPORTS AND EXPORTS, YEARS 1901 TO 1925-26.

*Penguin.

† NOTE.—The figures given for each port in the last three tables above do *not* take into account coastal movements of shipping. Ships are recorded as arrivals at the *first* Tasmanian port of call only, and as departures only at the last port of call, in Tasmania. A vessel coming direct to Stanley from Melbourne, calling at Burnie, Ulverstone, Devonport, and Launceston, and leaving the latter port for Sydney, would be recorded only as an arrival at Stanley and a departure from Launceston.

TASMANIAN STOCK AND CROPS.

REPORT BY THE DEPUTY-STATISTICIAN.

CROPS IN 1925-26.

The area cropped last season was 266,000 acres, an increase of 2500 acres on the previous year, but 13,000 acres less than the average of the last ten years. The season, like the previous one, suffered from a prolonged dry spell at midsummer. All crops, except wheat, gave yields lower than the average. Potatoes, hay, and pease in particular, had a bad year.

CROPS AND FORECAST.

The acreage estimated in December, 1925, was barely realised by the actual crops. Algerian oats and pease were the defaulters in this respect, and it is probable that a good many crops which failed entirely were omitted in error from the final returns. At the time of the forecast drought was threatening, and estimates were put low on this account. The actual returns were in general close to, but a little below, the estimates, but for pease the yield turned out appreciably worse than anticipated.

WHEAT.

There were 19,000 acres under wheat, an increase of 7000 acres on the previous year, but 4000 acres under the average. Wheat was the only crop that stood the dry weather, and gave a yield of 20·7 bushels per acre compared with a decennial average of 18·4. The increased acreage was chiefly in the three important wheat-growing municipalities of Westbury, Deloraine, and Latrobe. Westbury in particular doubled its acreage, and was rewarded with a yield appreciably above the average for the State, instead of having, as usual, one considerably under. Longford also showed a considerable increase in yield, although still under the average.

OATS AND HAY.

White oats at 20,600 acres were a little down from the previous year, and Algerians at 16,000 acres considerably down. Hay at 92,600 acres showed some increase. The hay acreage was only a little below the average, but oats for grain were in all only 37,000 acres, compared with an average of 51,000 acres for the last 10 years, and of 58,000 for the previous decade. White oats were in yield a little worse, and Algerians a little better, than the previous year. The combined yield was under 23 bushels per acre, compared with an average of 25 for the last 10 years, and 30 for the previous decade. The hay yield was very low, 25 cwt. per acre, compared with an average of 29 cwt. over the last 20 years.

PEASE.

The area under grey peas, 12,800 acres, was 2300 acres less than in 1924-25, but the area under blue pease, 8200 acres, showed a small increase. The total acreage does not differ much from the average of the last 10 years. The yields, 12 bushels for grey, and 13 for blue, were both 5 bushels under the average of the last 10 years, which was itself nearly 5 bushels below that of the previous decade.

POTATOES.

The potato area was 33,000 acres, a decrease of 3000 acres from the previous year, but somewhat above the average. The yield of just 2 tons per acre was one of the lowest on record, and may be compared with 2½ tons for the average of the last 10 years, and 3¼ tons for the previous decade. Circular Head, with 3¼ tons per acre, was the district that showed the best returns, while Table Cape went over 2½ tons. On the other hand, Kentish was under 1½ tons, and other important potato districts were little better.

APPLES.

The one crop to yield heavily was apples. Although the area under apples (25,500 acres) was slightly less than in 1924-25, the production of marketed fruit may be put at 4,132,000 bushels, or very nearly double of the average of the last 10 years. The value realised at the port of shipment or local market may be made up as follows:—

Apple Crop, 1925-26.

	Bushels.	s.	d.	£
Exports: Overseas	2,115,000	3	0	317,300
Exports: Interstate	1,599,000	5	7	446,400
Consumption: Factory	208,000	1	9	18,400
Consumption: Domestic*	210,000	4	0	42,500
				£825,000

* Rough estimate.

The price received for the whole marketed crop works out at about 4s. per case. To get the net value of apple production, however, there must be deducted from this £825,000 the cost of cases, packing material, and local freight, which may be put roughly at £300,000.

OTHER FRUIT.

The pear crop was returned at 220,000 bushels, but only about 140,000 bushels appear to have been marketed in any form, giving a return at port of shipment or local market of £40,000.

The acreage of apricots, as of all other large fruit, shows a slight reduction. The production, 102,000 bushels, was a little over the average. Plums, at 48,000 bushels, were a little under the average. Small fruit, on the other hand, increased from 2300 to 2400 acres and production (151,000 bushels) was considerably above the average.

HOPS.

The acreage of bearing hops was deliberately reduced from 1494 to 1193, to cope with a glut in the Australian market. The yield remained fairly steady at 1460 lbs. to the acre, giving a total production of 1,743,000 lbs., compared with 2,224,000 lbs. in 1925.

OTHER CROPS.

Turnips continue to make some recovery, and were grown on 3540 acres, compared with 3040 in the previous year, and an average of 2680 acres. The yield of 4·6 tons per acre was about the average of recent years, but compares badly with an average yield of 8½ tons per acre for the 10 years 1905 to 1915.

Mangels continue to decline, and covered only 387 acres.

Rye, beans, and grass-seed are now almost negligible.

LIVESTOCK IN 1926.

The counting of livestock in 1926 was more complete than any previously made, because a more thorough collection was made of the numbers of stock not on farm holdings, particularly those in the small country towns. For Hobart and Launceston the returns of previous years were fairly complete. Sheep are unaffected by this change, but an appreciable number is added to the numbers of horses and cattle, and to a less degree of pigs.

HORSES.

The number of horses returned was 37,800, a nominal increase of 700 on the previous year. When allowance is made for horses in country towns not before recorded, this increase is turned to a decrease of about 1000. The decline has been fairly steady from the high point of 1913 (44,000). The proportion of horses under one year old has, however, improved in the last three years, and there is generally some signs of a reaction to horses for farm-work, possibly temporary, and due to the present low cost of horse-feed compared with oil.

SHEEP.

Sheep were returned at 1,619,000, a small increase of 5000 over 1925. There has been a recovery of 70,000 sheep since the low point of 1922, but the number is still about 200,000 less than the numbers in 1919 and 1920. Lambing was poor in 1925. Lambs marked were 390,000, or 70 per cent. of ewes put to ram—the lowest percentage since 1918, when it was a shade lower. Sheep slaughtered and died are both larger than in the previous year, and net imports were about 20,000 in each year. The net result was an increase of 5000, compared with an increase of 56,000 the year before.

CATTLE.

Cattle show a considerable decrease, by 13,000 to 212,000, after increasing in each of the four preceding years. The number of cattle appears to move in waves. Four times in the last 20 years the number has risen to 220,000, and then declined again. The number of dairy cows remains steady, but all other classes are lower. The total decrease is even greater than that shown, because of the more complete collection, and may be put at 15,000 at least. Calves reared were 4000 less than in 1925, slaughtering a little heavier, and the number returned as "died" was 2000 greater. But this does not go far to explain the decrease, which remains rather mysterious. It is fairly uniform throughout the island. About half the municipalities in all parts show a decrease of 10 per cent. compared with the previous year. The remaining municipalities show a smaller decrease or are practically unchanged, with the exception of Scottsdale, which has a moderate increase.

MEAT CONSUMPTION.

The consumption of meat appears to have changed in a remarkable way of recent years. For the past four years, during which records of interstate trade have been kept, it has been possible to estimate with fair accuracy the Tasmanian consumption of various commodities. Taking the returns of sheep and lambs slaughtered and carcases imported, it appears that the average consumption of mutton per head per annum has fallen from 72 lbs. to 60 lbs., or by about one-sixth, in about three years. On the other hand, the consumption of beef has increased from about 73 lbs. per head to about 90 lbs. per head, or by nearly one-quarter. The actual amounts grown are subject to some revision, but there appears to be no doubt of the broad fact that there has been an increase in beef consumption of 25 per cent. in the last three or four years, partially balanced by a decrease in mutton consumption of about 17 per cent.

PIGS.

Pigs also show a large decrease from 47,000 to 41,000, which is the lowest number since 1921. The number of breeding sows is, however, unaltered, so that the decrease has probably little significance. The total number of pigs killed for pork or bacon was 62,000, compared with 55,000 in the preceding year, and the increased slaughtering just accounts for the decrease in livestock. It is worth noting that pigs reached double the present numbers in 1891, and again in 1905.

VALUE OF PRODUCTION.

AN attempt is made this year, in conformity with all the Australian States, to obtain a more exact value of agricultural and pastoral production.

In valuing the production of any industry, the aim is to obtain the amount of money which is available for division amongst all those concerned in the industry, whether as owners of land or capital, or as workers in any form at that industry. This amount forms the contribution of that industry to the national income. To obtain this value, the amount actually received for the products of the industry must be ascertained, and from this value must be deducted all the outside costs of the industry, things bought and used for the purposes of obtaining the marketed product. Such things are raw material, fuel, and power in manufacturing industry, and cases, bags, fertilisers, and spray material in agricultural production. It is not possible to obtain accurately all the costs of production, but the greater part can be ascertained or estimated sufficiently to give a satisfactory value for practical purposes.

Manufacturing production is already valued in this way with fairly complete deduction for costs. But the values previously given for agricultural production are so inflated as to be of very little significance, even for comparison over a term of years, and quite useless for comparison with manufacturing or other kinds of production.

The value hitherto given has been obtained by valuing the total amount of each crop produced on the farm at city market prices, and making no deduction whatsoever. First of all, the cost of bags, cases, &c., and of rail and other freights to market must be deducted. Next, the amount of grain, potatoes, &c., retained for seed ought to be allowed for. More important still is the amount of produce used on the farm to obtain other produce. The hay used for feeding horses, the green fodder, grain and roots consumed by cattle, sheep, pigs, and poultry on the farm—all these must be deducted from the total crops produced. Only that portion of the crops which is marketed or consumed by the farmer's family or employees can enter into value of production.

From the net returns for marketed produce obtained in this way must be deducted other costs of production, such as fertilisers, sprays, sheep dip, &c. A further deduction should be made for the cost of upkeep of the farm in purchased material, wire, and timber for fences and buildings, and the cost of repairing and renewing agricultural machinery. This last item, cost of upkeep, is not deducted in the estimates made this year. At present there are not sufficient data for an estimate, but it may be put at a rough guess as between £100,000 and £200,000 yearly. The other costs are taken into account.

It has been the practice in Australia to separate agricultural from pastoral production. The practice is not quite satisfactory anywhere, and is very inappropriate to Tasmania, where mixed farming prevails. If pigs are fattened on a crop of barley the value of the barley production is included in the price received for the pigs as baconers, and so would appear as pastoral production. Generally, the effect of the closer valuing of production now attempted is to reduce to about one-half the gross value of agricultural production, but to make comparatively small changes to pastoral production. The distinction however, is almost meaningless in Tasmania, and the two sides of land production should be taken together.

In the following table are given, side by side for four years, the gross value of all agricultural and pastoral products, as published hitherto, and the net value obtained in the manner explained above.

Agricultural and Pastoral Production.

	Gross Value of Products.		Net Value* of Production.
	£		£
1922-23	5,921,000	...	4,385,000
1923-24	5,814,000	...	4,483,000
1924-25	5,837,000	...	4,591,000
1925-26	5,972,000	...	4,274,000

* No deduction for cost of upkeep.

Roughly it may be said that the gross value is about one-third greater than the net value, but the difference fluctuates from year to year. In 1925-26 it was 40 per cent. greater, but in 1924-25 only 27 per cent. greater. It follows that the gross value is not even useful for purposes of comparison from year to year. Taking gross values 1925-26 appears as having a higher value of production than any of the three preceding years. The net values show that so far from this being the case, 1925-26 was substantially the worst of the four years under consideration.

The net value of different products cannot be given exactly, because some costs are calculated for farming as a whole and cannot be distributed between different crops. But the relative importance of different products can be shown roughly by giving the "farm" values of mar-

keted produce, *i.e.*, after deduction is made for bags, cases, freight, and other costs of marketing. The following table gives the principal "farm" values for the last four years:—

Farm Values of Principal Products.

In £1000's.

	1922-23.	1923-24.	1924-25.	1925-26.
Wool	781	1147	1429	1140
Mutton	312	496	368	306
Milk	634	722	526	520
Beef	409	503	470	420
Pigs	126	242	197	172
Potatoes	685	345	438	635
Fruit	779	557	757	696
Hops	223	197	200	139
Peas	127	113	94	94
Oats	210	131	92	64
Hay and straw	153	127	123	162

The great variations in some products such as oats and hay is, of course, due to the fact that farm needs take most of the crop, and it is only the surplus over farm requirements that is marketed. An increase of 20 per cent. in some crops may mean double the marketable surplus.

The valuation of agricultural and pastoral production given in this report and in the detailed tables which follow will be subject to further refinement and correction in future years, but it is believed that the figures given are for the first time a fairly satisfactory rough measure of the value of production, and reasonably comparable with those for manufacturing industry. The valuation of mineral production remains for the present in the crude state.

AREA, YIELD, AND VALUE OF CROPS, &c., 1925-26.

The following table gives the separate values of the chief agricultural and pastoral products, both the gross values at city prices and the farm values obtained by deducting cost of freight, bags, &c. *The separate items can not be added* to give a total value of production. See page 5. Some further deductions for selling, commission, &c., have still to be made to obtain strict "farm values," but these will not greatly affect the values given.

(a) The figures given are for Livestock exported and those slaughtered for meat, less the numbers imported. The prices taken are for fair-conditioned fats of the respective kinds of stock. † Includes estimate for unrecorded production based on actual exports.

VALUE OF PRODUCTION (NET).

(APPROXIMATE.)

The following table gives an estimate of the quantities and values of net agricultural and pastoral production for the past four years (see page 3). The quantities given are the quantities marketed together with an allowance for consumption by the producers and their families. The values differ from the "farm" values of individual products given on the preceding page, chiefly by deduction of hay and other forage used on the farm in order to obtain other products which are marketed. A general deduction is made for expenditure on fertilisers, spray material, sheep-dip, &c. A further deduction should be made for cost of upkeep of buildings, fences, and implements and for depreciation, but sufficient data are not yet available to make a satisfactory estimate of these costs.

Unlike the values on the previous page, these values *can be added together without duplication.* But only the final total for all agricultural and pastoral production together has real significance, because agricultural products consumed on the farm (and therefore not counted here) are used to produce the marketed stock, milk, and wool which are here given their full farm values.

NOTE.—The percentage in the last column is designed to give an approximate measure of the proportion of farming and pastoral land excluding Crown leases and licenses, that is rented from the owner. Share farms are left out as being intermediate in their nature. The figure given is the percentage of rented land to the total made up of rented land, freehold occupation, and Crown land in process of purchase on time payment.

MANUFACTURING INDUSTRY: TASMANIA.

Report for 1925-26.

A factory for statistical purposes in Australia is any establishment engaged in secondary production which uses mechanical power or employs more than three hands. Certain industries, however, have always been excluded from the Australian schedule, particularly all the constructing industries (buildings, wharves, bridges, railways, roads), and some of the more elementary food industries, such as bread-making and slaughtering.

1.—Number of Factories.

The number of "factories" (as defined above) making returns for 1925-26 was 727. Before the war the number had increased steadily for some years to 623 in 1913. There was then a decline to 540 in 1917, and since then a somewhat irregular increase. The increase since 1913 is entirely in small factories. Those employing four hands or less have increased from 191 to 252, and those employing from 5 to 10 hands have increased from 236 to 284. Nearly three-quarters of the present factories employ 10 hands or less.

2.—Persons Employed.

The number of workers (including working proprietors) employed in these establishments was 11,171, compared with 10,225 in 1920 (the year immediately following the end of the war), and 9,784 in the pre-war year 1913. The number of working proprietors was 522. The proportion of female workers (14·5 per cent of total workers in 1913 and in 1920) was 18·9 per cent in 1925-6. This increase is mainly due to the establishment of certain new industries employing a large amount of female labour, *e.g.*, confectionery-making and woollen mills.

The number of workers in most classes of industry shows an increase over 1913 figures. The chief exception is Class V., Metal Works, &c., which shows a decrease of 28, in spite of the establishment of the Zinc Works in this class. The class had dropped to 1803 workers in 1920, but has since almost risen to the pre-war level of 2073. The chief industries showing increases over 1913 figures are Lime and Cement Works (from 44 to 231), Wood-turning (11 to 108), Butter and Cheese (95 to 138), Biscuits and Confectionery (159 to 845), Woollen and Tweed Mills (227 to 774), and Cycle and Motor Works (147 to 398). Engineering, Boilermaking, &c., has decreased from 514 to 395, Tailoring, Clothing, and Dressmaking from 1134 to 694, Coach and Wagon-building from 213 to 163, and Saddlery, &c., from 96 to 32. The important industries of Sawmilling and Jam, Fruit-drying, &c., have remained fairly steady, with small fluctuations, employing about 1750 and 700 hands respectively.

3.—Size of Factories.

The proportion of workers in factories of various sizes is shown, compared with Australia as a whole, in the following table:—

	Tasmania.			Australia.
	1913.	1920.	1925-26.	1925-26.
Percentage of Workers in Factories Employing—				
1—20 workers.....	38	32	36	25
21—50 „	21	26	16	18
51—100 „	10	23	15	14
Over 100 „	31	19	33	43
	100	100	100	100

The distribution of workers according to sizes of establishments is substantially the same now as in 1913. There has been a slight increase in the proportion of workers employed in factories of over 50 hands, which now employ 48 per cent. of all workers against 41 per cent. in 1913. In 1920 the smaller proportions employed in very small and in very large establishments show how these types suffered through the war slump. Whereas there were 16 establishments with over 100 hands in 1913, by 1920 there were only 8 which still remained over 100. In 1925-26 the number has risen again to 13, and the number of workers in such establishments (3075 in 1913) has increased to 3685.

Comparing Tasmania with Australia as a whole, establishments between 21 and 100 hands are of equal importance in each. Tasmania, however, is behind in the proportion of workers in large establishments of over 100 workers, but has a much larger proportion in small establishments with 20 workers and less.

4.—Salaries and Wages.

Salaries and wages paid amounted to £1,989,991, compared with £1,565,330 in 1920 and £944,507 in 1913.

Omitting managers and foremen, accountants and clerks, the average rate of male wage in 1925-26 was £201 per annum, compared with £97 in 1913; and the female rate was £83, compared with £37. When the fall in purchasing power of money is taken into consideration, the rise in the male wage works out at 14 per cent., and in the female wage 24 per cent.

Rate of Wages Per Annum in Factories.

	Male.	Female.
	£	£
1913	97	37
1925-26	201	83
Do. at 1913 prices	111	46
Increase in real wages since 1913	14%	24%

The highest male wages were paid in the following classes of industries:—Metal Works (£231), Printing (£233), and Light and Power (£223). The lowest male wages in any important class were £157 in Clothing Trades and £155 in Furniture.

In the chief industries employing a considerable quantity of female labour, the average female wages paid were:—Biscuits and Confectionery, £97; Jam, &c., £101; Clothing and Tailoring, £93; Dressmaking, £67; Woollen and Tweed Mills, £65. In the last two industries a considerable number of girls between the ages of 16 and 21 are employed.

5.—Capital Value.

The capital value of land, buildings, plant, and machinery was returned as £8,907,550. It must be noted that this is not the same as the "capital invested" in industries. The figures supplied for capital value are in general the values taken in the books of the firms concerned; in the larger firms this figure is arrived at by taking off annually a regular amount for depreciation at a rate depending on the useful life of the building or machinery used. Occasionally the figures so arrived at have been corrected by a revaluation. The practice in regard to depreciation appears to vary greatly. In the larger firms the rate allowed tends to be more than ample, so that the plant is undervalued in the books. This is, to some extent, balanced by smaller firms, who make no allowance for depreciation, or do so only in years when profits are good. The tendency will be for the total capital values recorded to fall to about half the original capital invested, but while industry is expanding this point will never be reached.

In 1925-6 Land and Buildings were worth £2,202,560, compared with £981,660 in 1920 and £1,105,711 in 1913. Plant and Machinery was £6,704,990, compared with £1,931,527 in 1920 and £1,248,688 in 1913. The large increase in plant and machinery between 1920 and 1925-6 is largely due to the development of Hydro-Electric Works, the State Government works being valued last year at £3,040,000. Land, buildings, and plant show large increases compared with 1913 in the following industries:—Lime, Cement, &c. (£4130 to £319,400), Metal Extraction and Ore Reduction (£252,695 to £2,086,336), Biscuits and Confectionery, Woollen and Tweed Mills, Books and Printing, &c. (£113,124 to £203,303), Cycle and Motor Works and Furniture-making, &c. The only substantial decrease was in Breweries (£436,057 to £121,805).

6.—Raw Materials Used.

The value of raw materials (including containers, wrappers, &c.) was £3,609,895 in 1925-6, compared with £4,234,308 in 1920 and £2,083,666 in 1913. Of this £3,609,895, actual raw materials represented £3,365,049, and wrappers, containers, labels, &c., £244,846. The very high figure of 1920 is due, to some extent, to the high prices prevailing at the time.

7.—Power and Fuel Used.

The value of power and fuel used in 1925-6 was £280,013. In 1920 it was £155,222, and in 1913, £185,681.

8.—Value of Production.

The value of production of industries is defined as the amount available for distribution among those concerned in industries (all workers, proprietors of capital, &c.), *i.e.*, it is the total value of output, less costs of manufacture. Only in the last two years has it been attempted to obtain complete figures of costs, and in previous years the production has been taken as the total output less raw materials and fuel and power used—the only costs available. The production (calculated in this way for comparison) is shown in the following table:—

	1913.	1920.	1925-26.
	£	£	£
Output	3,782,831	7,151,972	7,605,194
Raw Material (including Containers, &c.)	2,083,666	4,234,308	3,609,895
Fuel and Power	185,681	155,222	280,013
Production	1,513,484	2,762,442	3,715,286
Production per £100 Labour Costs	160	176	187

The value of production, therefore, appears to have gone up substantially in the period in proportion to wages paid. This cannot be taken as a measure of the increased efficiency of factory labour or management. It is due primarily to the establishment of new industries using a large amount of fixed capital in the form of elaborate plant and machinery, and therefore requiring a greater return in proportion to wages to earn interest on capital. The variation in this respect between different industries is shown in the second table below.

A more accurate value of production, obtained by subtracting *all* ascertainable costs from value of output, is shown for the last two years, thus:—

	1924-25.	1925-26.
	£	£
Output	7,842,504	7,605,194
Raw Materials	3,442,292	3,365,049
All other Costs (*a*)	774,529	862,061
Net Production	3,625,683	3,378,084
Net Production per £100 Labour Costs	182	170

(*a*) Not including depreciation, on account of some uncertainty in the figures collected.

The net value of factory production for the last two years and the value per £100 wages and salaries paid per annum for 1925-26 for some of the chief industries were:—

Industry.	1924-5. Value.	1925-6. Value.	1925-6. Per £100 Labour Costs.
	£	£	£
Lime, Cement, &c.	108,688	108,916	217
Sawmills	375,494	352,977	130
Metal Extraction, &c.	837,915	840,258	259
Jam, Pulp, &c.	145,756	140,931	134
Woollen Mills	112,494	91,291	114
Books, Printing, &c.	215,691	201,905	130
Heat, Light, Power (Electric, Gas, Carbide)	419,002	352,775	376

The drop in the net value of production (not of necessity in the output) in 1925-6 from that of 1924-5, appears to be fairly general throughout industries, as indicated by most of the typical industries shown in the above table. The decrease is accounted for partly by a decrease in output, but mostly by an increase in the price of raw material without a corresponding increase in the price of the finished product.

9.—Power Used.

The gross total of power used in all establishments was 127,956 horsepower in 1925-6 and 17,850 horsepower in 1913. Of the various forms in which this was used, steam has fallen from leading place in 1913, with 12,127 h.p., to 5791 h.p. in 1925-6. Electricity has increased from 2796 to 50,397 h.p., and water-power from 2360 to 70,384 h.p. Other forms of power used are comparatively insignificant.

The gross total does not, however, give a correct statement of the horsepower *used* owing to the fact that the whole electric horsepower is, in reality, duplicated. It is shown once as electric power in the factory, where it is finally used, and again as water, steam, or other power at the electric power station, where other power is transformed into electric power. Therefore the actual horsepower used up in industries will be given by subtracting all electric power used from the gross total. According to this method the power used in 1913 was 15,054 h.p., and in 1925-6, 77,559 h.p.

The ultimate source of all power used in 1925-6 was:—From Water, 70,384 h.p.; from Coal, Wood, &c. (Steam-engines), 5791 h.p.; from Oil, 1033 h.p.; from Gas, 351 h.p.; making up the net total of 77,559 h.p.

The horsepower actually used for manufacturing purposes, however, will be better obtained by excluding the whole horsepower used at electric power-stations (thus avoiding the inclusion of power wasted in generation and transmission of electric current and electric power used for other purposes—tractive, domestic, &c.). The following is the result:—

Manufacturing Industries (Excluding Electric Power Stations).

	1913.	1925-6.
Power used (h.p)	10,222	57,190
Number of workers	9,572	10,989
Power used per worker (h.p.)	1·1	5·2

The large increase per worker in 1925-6 is due very much to the quantity of power used in special processes (electrolysis and heating) by the Zinc Works and the Carbide Works, which have been established since 1913. Excluding these industries from the 1925-6 figures for the sake of comparison, the power used in the remaining industries was 18,713 h.p., or 1·9 h.p. per worker. In the ordinary industries generally, therefore, a much larger use of power is now being made than in 1913—1·9 h.p., compared with 1·1 h.p. per worker.

10.—QUANTITIES OF ARTICLES PRODUCED.

The progress of some important industries may be gauged from the following table of chief articles produced:—

000 omitted throughout the table.

Articles Produced.	Output (000's). 1913.	1920.	1925-6.
Leather ... ... (pounds)	926	329	382
Bricks ... ... (number)	12,078	12,236	9,038
Sawn Timber ... ... (super feet)	60,780	63,108	54,593
Metals Extracted ... ... (£)	1,071	1,591	2,320
Bacon and Ham ... ... (pounds)	785	838	1,642
Butter and Cheese ... ... (pounds)	3,198	3,023	4,185
Jam, Pulp, Canned and Dried Fruit ... ... (pounds)	24,657	45,507	23,257
Ale, Beer, and Stout ... ... (gallons)	1,903	1,938	1,112
Tweed, Cloth, Flannel ... ... (yards)	277	222	844
Blankets and Rugs ... ... (number)	56	13	89
Hosiery ... ... (dozen pairs)	5	14	10
Electricity ... ... (B.T. units)	10,553	43,284	282,021

*Including Sinking Funds and Expenses, and based upon average rate payable on Public Debt and upon the proportion of loans expended (except in the case of Hydro-Electric Works and steamships—actual interest); but not including interest on Soldier Settlement, Closer Settlement, or State Advances Loans.

(*a*) Interest on loans for Post and Telegraph, Defence, Immigration, aid to revenue, less revenue from transferred properties.
(*b*) Including Engineering School, £2340. (*c*) Including Taxation Department, £24,109.
(*d*) Exclusive of £40,695, granted by Commonwealth Government for expenditure on Roads during 1925-26.

APPROXIMATE NET COST OF STATE FUNCTIONS

For Years 1890, 1900, 1910-11, *and Quinquenniad ended in Year* 1925-26.

(In this comparative Statement it is endeavoured to show approximately the Net Cost of each specific Function after distributing the Calculated Proportional Share of Interest and Sinking Fund against Particular Services, *less* the Amount of Earnings for Services actually rendered.)

Note.—Cost of raising loans is not included in Loans Expenditure, but is shown as the difference between the "net moneys raised" and the amount of securitie issued—and is apportioned, from year to year, between separate items, in the ratio which the amounts raised for the respective items bear to the whole raisings for the year. * Includes charges formerly shown separately, under items—"Public Works," "Roads and Bridges," and "Miscellaneous." — Indicates *minus*. (*a*) Originally Loaned by Commonwealth Government and in 1925-26 turned into a free gift. (*b*) Does not include Loan Expenditure on "Lurgurena" (£39,300) which is included in "other Public Works". The loss by "Steam Ships" to 30/6/25 was £231,703.

NOTE.—Income Tax is collectable for the calendar year, and since 1911 is based on the income for financial year (called in this table assessment year) ending six months before commencement of that calendar year. The analysis given in the Commissioner's Report refers to the tax for the calendar year preceding the one in which the report is issued, and which, consequently, is based on income for financial year 24 months before date of report

* Including on Lottery Prizes.

COMMONWEALTH TAXATION.

TAXES collected in Tasmania by Federal Government.

(*a*) Collections at the Central Office (which for the whole of the Commonwealth amount to approximately one-third of the Total) are not included.

(*b*) Actual collections in Tasmania. The amount of duty collected in the other States of the Commonwealth on goods transhipped to Tasmania is not included.

(*c*) Figures based on the assumption that the Customs and Excise Revenue per head in Tasmania, from 1913 onwards, bore the same proportion to the Customs and Excise Revenue per head for the Commonwealth that it did on the average for the nine years 1901 to 1909, for which years only full information is available. (The average per head, 1901 to 1909, in Tasmania was approximately 82% of the average per head for the Commonwealth.)

FRIENDLY SOCIETIES.

FRIENDLY SOCIETIES: REPORT OF THE STATISTICIAN FOR THE YEAR 1925.

SIR,

In accordance with the provisions of Section 10 of "The Friendly Societies Act, 1888," I have the honour to make the following report with respect to the year 1925:—

General.

Before proceeding to a detailed description of the operations of the year, one or two outstanding features may be specially referred to.

In spite of the very heavy loss of population during the year, the membership of friendly societies has been maintained. This is at once most satisfactory and most surprising. There has been during the last three years a net loss of about 2000 of the male population of friendly society age. It might reasonably be expected that about one-third of these would be members of friendly societies, so that the societies would have shown a loss of at least 600 by clearances in the three years. Instead of any such figure the net loss to the societies by clearances in the three years was only 24. Either members of friendly societies consistently refuse to abandon the State, however severe the economic depression, or else they fall out of the societies through arrears before they emigrate. But the loss of membership on account of arrears is not appreciably greater than in 1921, which is in itself sufficiently surprising. The only possible conclusion, then, is that members of friendly societies, whether from the strength of their economic position or from some other cause, are very rarely to be numbered among our lost population. Almost the only sign of the depression is a moderate decline for the past two years in the number of initiations.

Another satisfactory feature of the year was a much-needed improvement in the financial position of societies as a whole. This was chiefly the result of a low sickness and mortality experience, which may be considered accidental, but partly due to the efforts of several of the societies to improve their position by increasing membership dues. The net result is a surplus of 17 per cent. over current expenditure, compared with an average of about 12 per cent.

The lower figure is not enough, under Tasmanian conditions, to build up a reserve sufficient to cover liabilities for the future. A continuation of the low sickness and mortality rates cannot be counted upon, but judging from the general good health record of the first nine months of 1926, it may be hoped that the societies are continuing their favourable experience at least for the current year.

Another satisfactory feature is that more of the societies have taken the necessary steps to increase their income. Of the ten large societies whose position in 1921 showed serious deficiencies, all but two have now taken some steps in this direction, and one of these has now under consideration a substantial increase in rates of contribution.

The increases have been, in some cases, not at all adequate to the serious deficiencies disclosed in 1921, but they at least show a move in the right direction, and it may be hoped that the next valuation, which is now due, will show deficiencies considerably less, on the average, than those of 1921.

Societies.

The number of distinct societies registered under "The Friendly Societies Act" carrying on business in Tasmania is 20, which is the same as the number operating in 1924. These societies are divided into two classes, viz., ordinary, of which the are 14, and "special," which number 6. The ordinary societies have aims and objects practically identical one with another, provide benefits differing only in ratio to contributions, render reciprocal services, and have branches distributed throughout the State. There are 160 branches for males, 17 for females and 7 for juveniles, making a total of 184, which is the same as the number functioning in 1924. There is a falling off of 23 in the number of branches since 1916. The revenue of these societies is derived solely from moneys contributed by members. Special societies, on the other hand, are organisations, each composed of the employees of one firm or institution, which operate only in one centre, and whose funds, in most cases, are subsidised by the respective employers. Hence, the two classes of societies, while both were formed for the purposes of making provision in the cases of sickness and death, are not comparable in the matter of contributions paid by members, or benefits received by them.

Returns and Information.

Two copies of the printed report and tables showing the strength, progress, and financial position of each and all of the societies during the previous year, were forwarded to each district secretary, and single copies were sent to others on application.

Returns from lodge secretaries were, in the majority of cases, carefully filled in and promptly furnished. A few showed evidence of carelessness and negligence, which cause delay in publication of results and increased expense in administration. In the case of two lodges no return has been received. One of these is a very small lodge, and the secretary has been in hospital for months past; the secretary of the other (Penguin Tent, I.O.R.) has failed to reply to repeated communications, and the matter has been reported to the Registrar of Friendly Societies, with a recommendation to prosecute under "The Friendly Societies Act."

Membership.

At the end of the year the membership totalled 24,487, an increase during the year of 77, or about 3 per 1000. Of the increase 32 were juveniles, 21 females, and only 24 "adult" males, but even these few males were all in special societies. There was actually a decrease of 71 in the strength of male lodges of ordinary societies. The increase in membership, though a slight improvement on the previous year's progress, does not compare very favourably with the pre-war years, 1909-13, when the strength rose yearly about 33 per 1000, or with the post-war period, 1918-23, when the annual growth was 21 per 1000. But the decline in the rate of growth might well be attributed to the fact that in 1925 our population was decreasing at the rate of about 10 per 1000, while in the other

periods it was growing to the extent of from 8 to 11 per 1000. During 1925, in the case of males of ordinary societies, the loss of membership from falling into arrears with contributions was 82 per cent. of the initiations, against an average of 67 per cent. in the period 1920-24. The initiations, numbering 1132, exceeded the departures by arrears by 201; in 1923 the excess was 343, and in the last five years an average of 428. About 5·5 per cent. of all benefit members were unfinancial at the end of the year, against an average of 5·3 in the previous five years. There are about 68,000 males aged over 16 in Tasmania, and a corresponding enrolment of 22,841 in friendly societies, which is equivalent to about 35 per cent. But as the total membership of friendly societies makes no allowance for members who belong to more than one society, it is probable that only about 30 per cent. of adult males belong to these organisations.

Receipts.

Receipts from all sources totalled £115,111, which is the highest amount recorded to date. It is £2975 in advance of last year's takings, £13,313 above the average of the 1920-24 period, and £34,233, or 42 per cent., more than the revenue in 1913. Of the sum, contributions and levies furnished £81,104, which is £1698 more than in 1924, £6506 over the average for the last five years, and about 28 per cent. above corresponding figures for 1913. During the year payments made by adult financial members averaged £3 10s. 6d. per head, against £3 9s. 1d. in 1924, and a decennial average of £3 7s. 9d. Interest, which has been gradually mounting up since 1911, when it stood at £6788, supplied £18,572, or about 16 per cent. of the income. This is an advance of £964 on 1924, although the average rate has fallen from 5·78 to 5·41 per cent.

Compared with expenditure, revenue shows a margin of £17,075, or 17·42 per cent. This is relatively the highest surplus since 1907, when the record stood at 18·6. In 1924 the figure was 11·33 per cent., and in the 1920-24 period averaged 12·4.

Accumulated funds have grown during the year to the extent of £17,045, or 5·3 per cent. This is 2·3 per cent. above the decennial average, and is easily the most substantial increase since 1917, when the rate was 6·6. The total now is equivalent to £14 17s. per financial member, or an advance of 14s. 7d. on last year's figures, but is still well below the average for the Commonwealth.

Expenditure.

Expenditure totalled £98,036, which is a decrease of £2688 on the previous year's figures, but is £7516 greater than the annual average of the 1920-24 period. The falling-off was not confined to any one item, but was fairly evenly distributed over all, except administration, which showed an increase. Of the disbursements death claims accounted for £17,328, sick pay for £25,331, and management for £17,692.

The total payments for funeral benefits were £1446 less than in the previous year, when they reached £18,772, but were £1464 above the average of the 1920-24 period, and, except for 1924, were the highest since 1919. Death claims absorbed 17·7 per cent. of the gross expenditure, against 18·6 in 1924, and an annual average of 18·6 for the previous five-yearly period. Under the various classes of claims the average payment per case was, by special societies, £23, and by ordinary societies for females £12 5s., for wives £13 6s. 5d., and for adult males £71 11s. 11d. This lastmentioned amount, which is the most important, is 11s. 5d. below the average of last year, but is 8s. 1d. above the figures for 1923, and £1 14s. 3d. over those for the period 1919 to 1924. Average payments are influenced by alterations in ratios of deaths in respective societies.

Compared with 1924 the cost of medicine and medical attention shows a slight decrease, viz., from £27,347 to £26,731. Per financial member the cost of medicine, &c., has fallen from 23s. 8d. to 23s. 1d., a saving of 7d., against 22s. 10d. in 1923, and of 21s. 11d. for the five-yearly period 1920-24.

The amount absorbed in administration was £17,692, or 18·04 per cent. of the total expenditure. Relatively the cost is mounting up from year to year. In 1910 management ran into 10s. per financial member, in 1920 to 12s. 6d., in 1924 to 14s. 9d., and in 1925 to 15s. 3d., or 2s. 9d. above the average of the past decade

Societies in general have had a favourable experience during the year, and the result is reflected in the increase in receipts and the reduction in expenditure.

Sickness and Mortality.

Members receiving sick allowance were substantially fewer in number than in the preceding year, but the aggregate duration of sickness, though considerably less, was not reduced quite in proportion. In 1925 the cases numbered 4175, against 4520 in 1924, a decline of 345, or 7·6 per cent. The total measure of illness was 225,372 days, which is 7961 days less than in the previous year, but still 7371 above the quinquennial average. Per financial member "adult" males experienced 10·0 days' sickness. This is ·3 of a day better than 1924, and half a day better than 1923, but ·1 of a day worse than the average of the 1920-24 period. The figures for "adult" females are 6·2 days, which is a day and a half better than the decennial average, and easily the best in the decade.

Death claimed 230 members, of whom 226 were "adult" males and 4 "adult" females, against 249 and 12 respectively in the preceding year, and an average of 247·1 for both sexes in the last decade (which includes the war period). Amongst "adult" males the mortality rate per 1000 financial members was 10·46, compared to 11·52 last year, and an annual average of 9·64 in the five years 1920 to 1924. Except 1924 the experience is the most unfavourable since 1919, when it rose to 13·48, but this latter rate is inflated by the belated registration of some war casualties. The rate amongst "adult" females was only 2·93, which is well below the quinquennial average of 5·27 but it is not nearly as favourable as 1923, when it was as low as 0·72.

Valuation.

Another quinquennial valuation is now due. Owing to the slowness of some of the societies to take steps to remedy the serious position disclosed by the valuation of 1921, it is recommended that the next valuation be postponed for a year, by which time it may be hoped that an increased scale of dues will be operative for all societies in need of this drastic treatment.

The usual statistical summary will be found in the Tables 1 to 7 which follow, and more detailed information in the ensuing pages.

L. F. GIBLIN,
Government Statistician.

NOTE.—In years 1915 and 1916 the receipts include moneys which were found to be Trust Funds which should have appeared as transfers. The capital shows these funds (some £6000 in 1915 and £3725 in 1916) in duplicate, in addition to details shown in these two years respectively.

* Deducting cross entries, £1190 in 1905, £388 in 1906, £505 in 1907, £706 in 1908, £391 in 1909, £430 in 1910, £1334 in 1911, £706 in 1912, £1899 in 1913, and £1192 in 1914. In 1915 and onward for cross entries, see annual detail.

† Juvenile Lodges not included.

§ Capital of Lodges closed during year 1914, £45.

‖ Excluding value of Dispensary Stock on hand in 1913, £685; in 1914, £1588; in 1915, £1491; in 1916, £1744; in 1917, £1981, in 1918, £2403; in 1919, £2871; in 1920, £3060; in 1921, £3558; in 1922, £2986; in 1923, £3262; in 1924, £3526; in 1925, £3556.

‡ In 1920 and onward "Consolidated Sick Funds" and "Juvenile Funeral Funds," &c., which appear in District Returns for respective years in "Other Funds," are included in this column.

[Compiled by Government Statistician from Returns furnished by the Secretaries of the various Lodges.]
